

About us

Digital currency is a term that refers to a specific type of electronic currency with specific properties. Digital currency is also a term used to include the meta-group of sub-types of digital currency, the specific meaning can only be determined within the specific legal or contextual case. Like existing forms of money, a CBDC would enable the general public to make digital payments. As a liability of the Federal Reserve, however, a CBDC would be the safest digital asset available to the general public, with no associated credit or liquidity risk.

What Is Cryptocurrency?

Cryptocurrency, or "crypto", is a digital currency that uses cryptography to secure transactions and is not controlled by a central bank or government. Cryptocurrencies are decentralized, meaning they are not issued or governed by a central authority. Instead, they are generated by network algorithms or issued by their developers. What is cryptocurrency? Cryptocurrency (or "crypto") is a digital currency, such as Bitcoin, that is used as an alternative payment method or speculative investment.

What is trading crypto

A cryptocurrency, crypto-currency, or crypto is a digital currency designed to work as a medium of exchange through a computer network that is not reliant on any central authority, such as a government or bank, to uphold or maintain it. It has, from a financial point of view, grown to be its own asset class. A cryptocurrency exchange is an online marketplace where users buy, sell, and trade cryptocurrency. Crypto exchanges work similarly to online brokerages, as users can deposit fiat currency (such as U.S. dollars) and use those funds to purchase cryptocurrency.
